***Restriction Requirement***

Restriction to one of the following inventions is required under 35 USC 121:

I. Claims 1-7 drawn to a method of assembling a gas turbine combustor classified in Class 29, subclass 890.02, and

II. Claims 8-19 drawn to a combustor and turbine-combustor combination classified in Class 60, subclass 748.

The inventions of Groups I and II above are distinct because the method of Group I could be used to make gas turbine combustor apparatus materially different than that of Group II, and/or the combustor apparatus of Group II could be made by a method materially different than that of Group I. The claimed apparatus, for example, does not require the domeplate machining step specified in the claimed method; the domeplate in the claimed apparatus could be made by an alternative process such as stamping, casting, etc.

Because these inventions are distinct for the reasons given above and require separate classification and/or divergent fields of search, restriction for examination purposes as indicated is proper.

Applicants are advised that even in the event that the restriction requirement is traversed, the response to this requirement to be complete must include an election of the invention to be examined. (The undersigned was unable to make contact with
